

Nexis® Data as a Service

Delivering Data to Empower Decision-Making

Move beyond internal datasets to unlock big data's real potential

Where can you find relevant datasets to power your AI initiatives? Organizations worldwide choose Nexis® Data as a Service to fuel innovation and insight with critical news, business, regulatory, legal and patents data.

Empower data scientists with normalized, semi-structured data—no wrangling required—so they can spend more time on data modeling and analysis. With datasets from Nexis Data as a Service, the possibilities are endless:

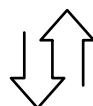

- Leverage archival news data for financial quant modeling and power predictive analytics based on event/price correlations in near real time news data.
- Strengthen due diligence and risk monitoring with access to critical sanctions and PEPs data and adverse news feeds.
- Identify signals in news and social commentary related to brands or competitors to enhance PR, marketing, and sales efforts.
- Make use of high volume, text-based data to support academic research—from testing machine learning algorithms to conducting trend analysis.
- Enhance corporate R&D capabilities with timely, relevant data to fuel competitive analysis, product innovation and other strategic AI priorities.
- Take advantage of targeted data to add value to a CRM, proprietary application, or intranet.

Flexible Data Delivery

Bulk APIs

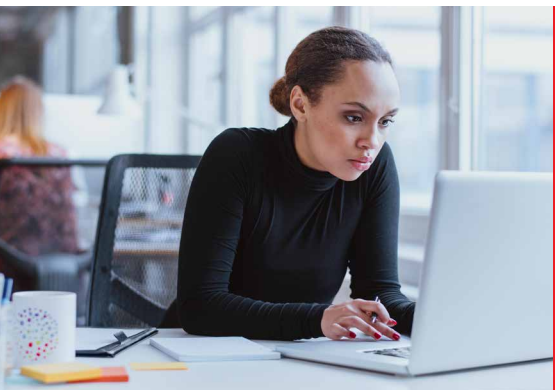

Access high-volume feeds of news, company, or patents data for historical analysis and predictive analytics.

Search & Retrieve APIs

Retrieve data on demand with enhanced functions—search, retrieve and saved searches— that work within your own user interface.

All supported by a redundant data infrastructure that boasts 99.9% application reliability and availability.

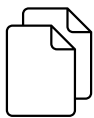

Complement internal data for better insights

Get access to an exceptional range of third-party data aggregated to meet a variety of needs. What sets Nexis Data as a Service apart from other alternative data providers?

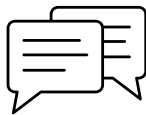

Data Variety & Volume

Access an unrivaled source universe relevant to a wide range of use cases. Our text-based datasets span:

- Licensed print, broadcast, and web news
- Online news, blogs, and social commentary
- Company data
- Directories, biographies, and analyst reports
- PEPs, sanctions and watchlists
- U.S. case law, statutes, dockets, bill tracking, and administrative materials
- International primary law data from five countries
- Patents covering 105 countries

3.5 million
documents
added daily

80,000+
news sources from
100+ countries
in 75 languages

280 million
companies
covered

Aggregated content
from 80 patent
data sources and
patent authorities

40+ year
news archive

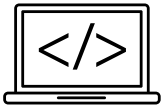

Data History

Tap into decades of news data to conduct trend modeling. We have been delivering technology and content to customers around the globe since 1973.

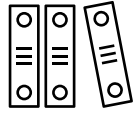

Data Enhancement

Spend less time wrangling data and more time extracting insights from it. Our industry-leading data fabrication, classification, and enrichment process:

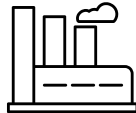

- Creates clean, semi-structured XML data for integration into a database or application
- Enables data discovery—even when content is produced in different languages—through algorithmic semantic analysis
- Supports more targeted data calls that yield more relevant data, thanks to metadata tags, topical classification, entity extraction, and other enrichments.

Why Nexis Solutions?

We don't just talk the talk when it comes to data and advanced technologies. Our global team of content experts works closely with publishers worldwide to build a comprehensive, collection of text-based data relevant to myriad industries and data use cases. This content aggregation expertise is complemented by our patented innovations in clustering, advanced search, machine learning, and artificial intelligence. All backed up by support services to help you realize maximum value from your enterprise data integrations.

- Dedicated account managers
- On-site, telephonic, and web-based training and support options
- Pre-implementation technical expertise
- Premium 1-to-1 assistance from a team member with real life, industry experience
