

Gain Invaluable Insights into Sustainable Technologies

Conduct objective patent analyses against the United Nations Sustainable Development Goals (UN SDGs) using LexisNexis® PatentSight®

Patent data reveals unique insights about sustainable innovations and future-oriented technological developments

Sustainability is the new value indicator for investors and a key decision-making factor for consumers. Get actionable insights into how sustainably focused you and your competitors are using the objective and forward-looking measurement of patents.

Identify growth opportunities in emerging markets

Gain competitive advantages in future-oriented technologies

Support strategic decision making for sustainable investments

Increase stakeholder engagement and funding

Mapping patents to UN SDGs

LexisNexis® patent experts defined 97 technology fields directly related to the UN SDGs. The searches and search topics underlying these technologies and the SDGs to patent mapping are not generic, but are based on each UN SDG targets, indicators and metadata.

Therefore, not only does this approach have a more complete scope than those found in the EPOs CPC Y02 classification or the IPC Green Inventory of the WIPO, but it is also aligned with a widely accepted framework.

Objectively measure sustainability with an unprecedented mapping of patents to the UN SDG

Unique measurement

PatentSight® is the first provider to distinctly map patents in analysis against targets and indicators of UN SDGs and to measure an organization's contribution to SDG-related research.

Accurate and transparent

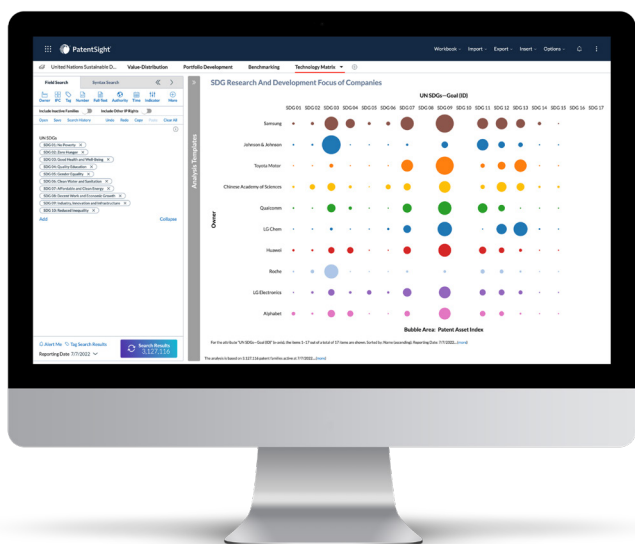

Expert curated SDG mapping to a high-quality patent data set containing reliable commercial ownership tracking and legal status information helps shed more light to the effort companies put toward becoming SDG compliant, and avoids "green washing."

Objective valuation

SDG patent mapping, in combination with the industry-proven and validated patent value indicator PatentSight Patent Asset Index reveals real champions and allows stakeholders and shareholders a better decision-making and reporting process.

Accessible and convincing

Patent-based SDG assessment is easy to access and run, even for those who are not patent experts. Boardroom-ready visualizations make findings easy to digest and share.

How to leverage PatentSight SDG analysis

- Understand involvement and identify gaps in sustainable technology development
- Objectively measure and evaluate progress to SDGs
- Develop strategy for sustainable technology investment
- Communicate SDG progress and road map to reach 2030 goals
