

Streamline Your IP Workflows and Automate Patent Data Processing

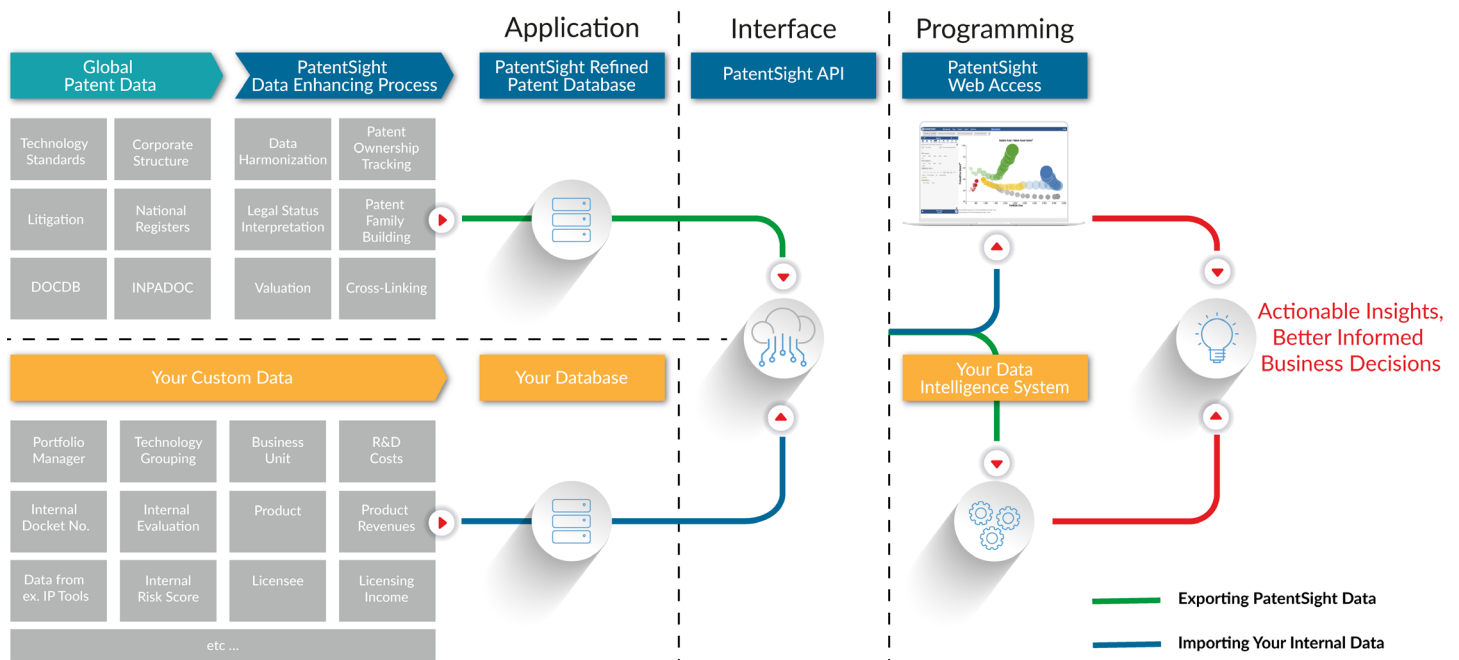

Seamlessly integrate your internal data with PatentSight® high-quality patent data and analytics, using our new API

Now you can automate your recurring reports and streamline your workflow, with our latest solution, the PatentSight Application Programming Interface (API). Easily bring in PatentSight's best-in-class patent data into your in-house intelligence applications. You gain direct access to enriched data without having to switch between software tools or

waiting for large exports. The new PatentSight API also gives you the ability to automate the uploading of large quantities of business information, as Custom Fields, into your PatentSight Business Intelligence account. These capabilities will further enable you perform comprehensive analyses with minimal effort.

PatentSight Application Programming Interface

What can you do with the PatentSight API? – Reduce Costs and Save Time

Save both time and money by automating your workflow. With the powerful PatentSight API you will be able to:

- Automatically update your regular reports created on other tools by using the API's direct access to the PatentSight database.
- Extract large quantities of regularly updated patent information including PatentSight Legal Status, Ultimate Owner as well as patent clusters to directly analyze within your internal tools.
- Store and synchronize PatentSight's patent information that you need in your organization's database.
- Easily and securely import large amounts of your business data into your PatentSight account, as Custom Fields. This could be any internal data, like:
 - Prosecution and maintenance information
 - Litigation information
 - Related business unit
 - Financial information
 - Licensing information
 - Patent reviews and assessments

Which PatentSight data can you access through the PatentSight API?

The PatentSight API will be continuously extended by adding new data sets to the offering. The first data fields that will be available to you, via our API, are:

- Ultimate Owner information
- Technology Clusters
- LexisNexis patent family number
- Titles
- Legal Status
- Publication date
- Priority date
- and more

The API will enable you to automate the synchronization between your internal information and PatentSight data, thereby reducing your recurring workload and save valuable resources.
